

Revenue cycle automation — the future is here

Improve your cash flow through faster processing, lower costs, and reduced workloads.

Data-driven analytics

Speed, accuracy, and optimal outcomes for your patients and cash flow — these are the hallmarks of a successful, modern revenue cycle. Smart new technologies are emerging daily, helping healthcare systems reduce costs and workloads and achieve their financial goals. At Xtend Healthcare, we put automation to work for our clients nationwide, resolving their accounts efficiently and compliantly.

Our proprietary workflow and process management system (Prism) helps clients automate their processes, analyze their data, identify and act on insights, and optimize outcomes.

Here's how it works:

Today's revenue cycle is filled with applications for data-driven analytics. From expected claim reimbursements, to denial classifications, to eligibility, and more, our artificial intelligence (AI)-supported solutions help us determine next steps, resolve account balances faster, and optimize outcomes for our clients.

Prism delivers actionable insights for our clients, helping them better manage key issues affecting their revenue cycles. These issues include:

- **Reimbursement** — create more accurate forecasts with evidence-based reimbursement estimates
- **Denial management** — reduce costs and process times, support patients, strengthen cash flows
- **Adjustment automation** — eliminate inefficiencies and ensure fast resolutions

The self-driving car may still be miles down the road, but today's savvy health systems are already benefiting from advanced, automated revenue cycle solutions. Are you ready to modernize your revenue cycle, for the good of your system and those you serve?

Contact us today. Let's bring more speed and cash into your revenue cycle.
